OFFICIAL WHITEPAPER | VERSION 3.0 | POLYGON MAINNET (ERC-20)

ECOSYSTEM HOUSING TOKEN (ECOST)

Bridging Real-World Residential Property Transaction Value into the Digital Asset Ecosystem

1. Executive Summary

ECOSYSTEM HOUSING TOKEN (ECOST) is a community-oriented utility token designed to connect real-world cash flows from residential property transactions in Indonesia with the Polygon blockchain. Rather than relying solely on speculative market sentiment, the ECOST ecosystem is supported by a structured, transparent buyback mechanism funded directly by successful real estate developer commissions.

2. Background & Solution Approach (Web2.5 RWA)

The conventional residential real estate sector—spanning landed houses, residential land plots, shophouses, and commercial properties—generates consistent economic activity. However, forcing full cryptocurrency settlement onto traditional property buyers often creates regulatory and operational friction. ECOST resolves this barrier through a practical **Web2.5 transition model**:

- **Frictionless Fiat Settlement:** Property reservations, down payments, and closing deeds (*Akad*) are conducted entirely in Indonesian Rupiah (IDR) in compliance with local financial regulations.
- **Post-Closing Reward Distribution:** ECOST tokens are distributed to property buyers strictly after all legal and administrative closing procedures are 100% completed.
- **Real-Revenue Treasury Buyback:** Upon receiving developer sales commissions from completed property transactions, the Project Treasury allocates **5% to 10%** of net commission revenue to execute transparent on-chain buybacks of ECOST on Polygon decentralized exchanges (DEXs).

3. Technical Specifications & Tokenomics

The ECOST smart contract is deployed on the Polygon Mainnet using the audited OpenZeppelin ERC-20 standard with a permanently fixed supply and zero internal transaction tax.

3.1 Smart Contract Parameters

Parameter	Specification Details
Token Name	ECOSYSTEM HOUSING TOKEN
Symbol / Ticker	ECOST
Blockchain Network	Polygon Mainnet (Chain ID: 137)
Contract Standard	ERC-20 (OpenZeppelin Standard, Fixed Supply, 18 Decimals)
Contract Address	`0x417F973D3AE2028309AE99C1e57AB1186ab78901`
Maximum Total Supply	100,000,000 ECOST (No minting function; supply is permanently capped)
Transaction Tax	0% (No buy, sell, or transfer tax inside the smart contract)
Official Contact	ecosystemhousingtoken@gmail.com

3.2 Token Allocation & Governance

Allocation Category	Share	Token Amount	Management Mechanism
Liquidity Pool (DEX)	35%	35,000,000 ECOST	Paired with USDT on a Polygon DEX to establish initial market liquidity.
Property Buyer Rewards	30%	30,000,000 ECOST	Distributed directly to verified property buyers after closing completion.
Team & Development	20%	20,000,000 ECOST	Dedicated to long-term platform engineering, maintenance, and operations.
RWA Expansion & Treasury Reserve	15%	15,000,000 ECOST	Reserved for real estate developer partnerships and ecosystem expansion.

4. Development Roadmap (2026 – 2028+)

> **Phase 1 (Q4 2026): Foundation & Initial Liquidity Launch**
>
> Deployment and verification of the ECOST smart contract on Polygon Mainnet, establishment of the initial ECOST/USDT liquidity pool, and initiation of post-closing buyer rewards and commission-backed buybacks from family property sales.

Phase 2 (2027): On-Chain Transparency & Agency Partnerships

Launch of a public on-chain tracking dashboard documenting property-backed treasury buybacks, alongside onboarding external real estate marketing agencies and local residential developers.

Phase 3 (2028+): Digital Real Estate Ecosystem Integration

Exploration of formal digital financial innovation frameworks (Regulatory Sandboxes) to introduce compliant fractional property utility and yield-sharing tools.

5. Legal Disclaimer & Risk Disclosure

ECOSYSTEM HOUSING TOKEN (ECOST) is issued strictly as a community utility token and customer loyalty asset within a real estate transaction ecosystem. ECOST does not constitute legal tender in the Republic of Indonesia, does not represent direct equity or corporate share ownership in any entity, and does not guarantee fixed financial returns or profit yields. Digital asset markets are subject to price volatility and regulatory changes; holders assume full responsibility for managing their own wallets and risk exposure.
